1.3.	Codec Driver Tests .....	9

# 1 Codec Customization Requirements

Quectel supports several Codec (ALC5616, NAU8814, NAU8810, and TLV320AIC3104) by default. The Codec driver supports both dynamic and static loading. Users can modify Codec loading method according to personal needs. If users do not need to use the Codec that Quectel recommends, please refer to this document to modify the code in order to integrate the corresponding Codec driver.

## 1.1. Hardware Connection Diagram and GPIO Configuration

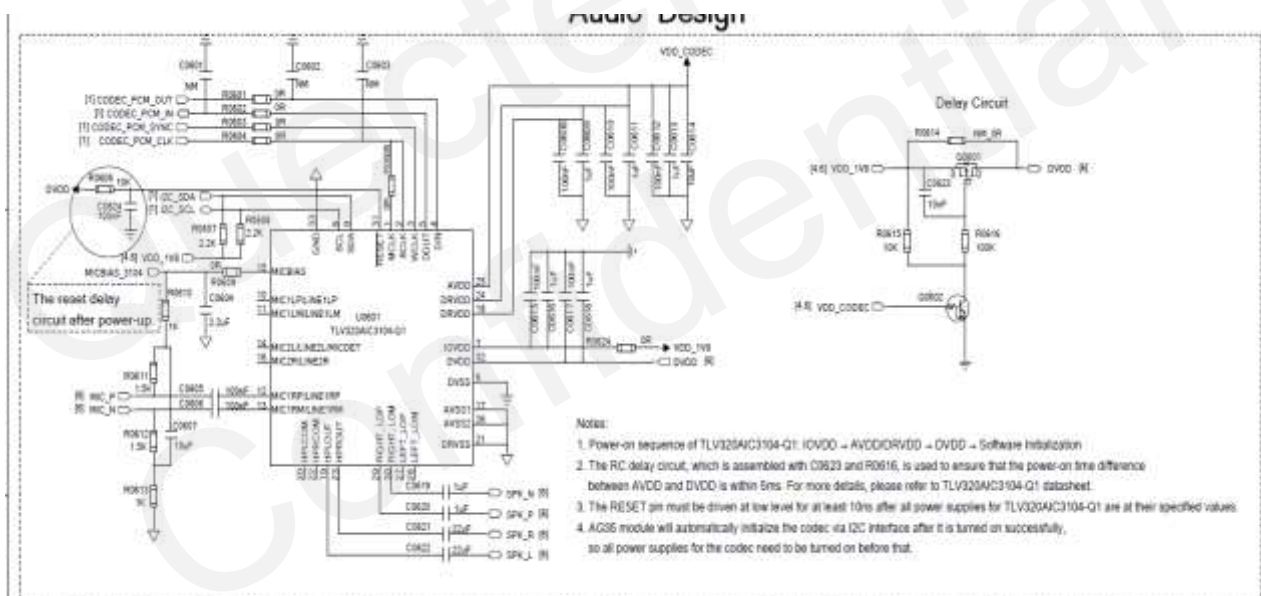

Figure 1: TLV320AIC3104 Hardware Connection Diagram

Table 1: CODEC PIN

CODEC PIN	MDM9x28 PIN
CODEC_PCM_OUT	GPIO77/GPIO22
CODEC_PCM_IN	GPIO76/GPIO21
CODEC_PCM_SYNC	GPIO79/GPIO20
CODEC_PCM_CLK	GPIO78/GPIO23
I2C_SDA	GPIO18(AGxx), GPIO6(ECxx),
I2C_SCL	GPIO19(AGxx), GPIO7(ECxx),

In Table 1, CODEC\_PCM\_OUT, CODEC\_PCM\_IN, CODEC\_PCM\_SYNC and CODEC\_PCM\_CLK are the pins to control audio data and clock signals. I2C\_SDA(GPIO18) and I2C\_SCL(GPIO19) are the pins of I2C data and I2C clock respectively, which control the operations of reading and writing the Codec register.

## 1.2. The Method to Add the Codec Driver

If users need to add another new codec driver, go through the following four steps.

- Confirm the parameters on PCM such as mode, fsync, clock, format etc. according to PCM interface requirements on codec datasheet. Then configure mdm9607.dtsi according to these parameters so that to configure the multiplexing of module PCM pins and PCM format of the module end. For more detailed configurations, please refer to Chapter 1.2.1.
- Obtain the Codec driver code and add it to kernel. For detailed methods, please refer to Chapter 1.2.2.
- Configure the Codec name at boot. For detailed methods, please refer to Chapter 1.2.3.
- Recompile and download to confirm that the newly added Codec can be used normally.

Take ALC5616 as an example to introduce the specific method of adding the Codec driver.

### 1.2.1 Configure the Module PCM Interface Parameters Based on Codec PCM

#### Parameters

Modify msm-3.18/arch/arm/boot/dts/qcom/mdm9607.dtsi

```
sound-9306 {
    compatible = "qcom,mdm9607-audio-tapan";
```

```
qcom,model = "mdm9607-tapan-i2s-snd-card";
status = "disabled";

.....
+++dai_sec_auxpcm: qcom,msm-sec-auxpcm {
    +++compatible = "qcom,msm-auxpcm-dev";
    +++qcom,msm-cpudai-auxpcm-mode = <0>, <0>;
    +++qcom,msm-cpudai-auxpcm-sync = <1>, <1>;
    +++qcom,msm-cpudai-auxpcm-frame = <5>, <5>;
    +++qcom,msm-cpudai-auxpcm-quant = <2>, <2>;
    +++qcom,msm-cpudai-auxpcm-num-slots = <1>, <1>;
    +++qcom,msm-cpudai-auxpcm-slot-mapping = <1>, <1>;
    +++qcom,msm-cpudai-auxpcm-data = <0>, <0>;
    +++qcom,msm-cpudai-auxpcm-pcm-clk-rate = <2048000>, <4096000>;
    +++qcom,msm-cpudai-afe-clk-ver = <2>;
    +++qcom,msm-auxpcm-interface = "secondary";
    +++pinctrl-names = "default", "idle";
    +++pinctrl-0 = <&sec_auxpcm_ws_active
        &sec_auxpcm_sck_active
        &sec_auxpcm_dout_active
        &sec_auxpcm_din_active>;
    +++pinctrl-1 = <&sec_auxpcm_ws_sleep
        &sec_auxpcm_sck_sleep
        &sec_auxpcm_dout_sleep
        &sec_auxpcm_din_sleep>;
};
```

Configure Codec driver parameters by using Codec driver interface `rt5616_set_dai_fmt` of `alc5616`.

```
static int rt5616_set_dai_fmt(struct snd_soc_dai *dai, unsigned int fmt)
{
    struct snd_soc_codec *codec = dai->codec;
    struct rt5616_priv *rt5616 = snd_soc_codec_get_drvdata(codec);
    unsigned int reg_val = 0;

    switch (fmt & SND_SOC_DAIFMT_MASTER_MASK) {
    case SND_SOC_DAIFMT_CBM_CFM:
        rt5616->master[dai->id] = 1;
        break;
    case SND_SOC_DAIFMT_CBS_CFS:
        reg_val |= RT5616_I2S_MS_S;
        rt5616->master[dai->id] = 0;
        break;
    default:
        return -EINVAL;
    }

    switch (fmt & SND_SOC_DAIFMT_INV_MASK) {
    case SND_SOC_DAIFMT_NB_NF:
        break;
    case SND_SOC_DAIFMT_IB_NF:
        reg_val |= RT5616_I2S_BP_INV;
        break;
    default:
        return -EINVAL;
    }

    switch (fmt & SND_SOC_DAIFMT_FORMAT_MASK) {
    case SND_SOC_DAIFMT_I2S:
        break;
    case SND_SOC_DAIFMT_LEFT_J:
        reg_val |= RT5616_I2S_DF_LEFT;
        break;
    case SND_SOC_DAIFMT_DSP_A:
        reg_val |= RT5616_I2S_DF_PCM_A;
        break;
    case SND_SOC_DAIFMT_DSP_B:
        reg_val |= RT5616_I2S_DF_PCM_B;
        break;
    }
}
```

### 1.2.2 Add the Codec Driver to Kernel

- Write the Codec driver source code based on alc5616 codec datasheet.
- Copy the Codec driver alc5616.c, alc5616.h into the directory msm-3.18/sound/soc/codecs.
- Modify msm-3.18/arch/arm/config/mdm9607\_degconfig(debug) mdm9607-perf\_defconfig(release)  
+++CONFIG\_SND\_SOC\_ALC5616=y or +++CONFIG\_SND\_SOC\_ALC5616=y  
Modify msm-3.18/sound/soc/codec/Makefile ,

```
snd-soc-tas2552-objs := tas2552.o
+++snd-soc-alc5616-objs := alc5616.o,
+++obj-$(CONFIG_SND_SOC_ALC5616) += snd-soc-alc5616.o
```

Modify msm-3.18/sound/soc/codecs/Kconfig

```
Config SND_SOC_TLV320AIC3XX
Tristate "Texas Instruments TLV320AIC31xx"
Depends on I2C
Select REGMAP_I2C
+++config SND_SOC_ALC5616
+++tristate "alc5616 codecs"
```

### 1.2.3 Select the Codec Loaded at Boot

When codec\_name is registering Codec driver, the code obtains the name of i2c\_driver, i2c bus and slave addr, and also splices the three strings together. Here codec\_name = "i2c->driver->name.i2c\_bus-i2c->addr" when loading the new Codec driver. For rx\_dai\_name and tx\_dai\_name, keep them the same name as that of Codec driver code snd\_soc\_dai\_driver.

```
struct snd_soc_dai_driver rt5616_dai[] = {
{
.name = "rt5616-aif1",
.id = RT5616_AIF1,
.playback = {
.stream_name = "AIF1 Playback",
.channels_min = 1,
.channels_max = 2,
```

Modify msm-3.18/sound/soc/msm/mdm9607.c

```
---static char quec_codec_name[32] = {'a'};
---static char quec_rx_dai_name[32] = {'a'};
---static char quec_tx_dai_name[32] = {'a'};
+++static char quec_codec_name[32] = {"alc5616-codec.4-001b"};
+++static char quec_rx_dai_name[32] = {"rt5616-aif1"};
+++static char quec_tx_dai_name[32] = {"rt5616-aif1"}
```

## 1.2.4 Compile, Download and Debug to Confirm If the New Codec Driver Can be Loaded

Compile SDK Development Environment.

- make kernel\_menuconfig (Must-do: Modify xxx\_defconfi, )
- make kernel
- Check if the driver code has compiled and generated alc5616.o

```
yang@server1:~/yang_967/qi-ol-sdk/qi-ol-kernel/nsn-3.18/build/sound/soc/codecs$ ls
alc5616.o      nax9867.o      snd-soc-alc5616.o  snd-soc-wcd9386.o  tlv320aic3x.o  wcd9386-tables.o  wcdcal-hwdep.o
audio-ext-clk.o  modules.builtin  snd-soc-nax9867.o  snd-soc-wcd9386.o  wcd9386.o      wcd9386-common.o  wcd_cpe_core.o
audio-ext-clock.o  modules.order  snd-soc-nsn-stub.o  snd-soc-wcd9xxx.o  wcd9386-tables.o  wcd9xxx-hbhc.o  wcd_cpe_services.o
built-in.o      nsn_stub.o      snd-soc-tlv320aic3x.o  snd-soc-wcd-cpe.o  wcd9386.o      wcd9xxx-resmgr.o
```

- Check If PCM device of sound card has registered in ls /dev/snd

```
~ # ls /dev/snd
controlC0  hwCOD33  pcmCOD12p  pcmCOD17c  pcmCOD21c  pcmCOD3c  pcmCOD9c
hwCOD10    hwCOD39  pcmCOD13c  pcmCOD17p  pcmCOD22p  pcmCOD3p  timer
hwCOD11    hwCOD40  pcmCOD13p  pcmCOD18c  pcmCOD23c  pcmCOD4c
hwCOD12    hwCOD9   pcmCOD14c  pcmCOD18p  pcmCOD24p  pcmCOD4p
hwCOD13    pcmCOD0c  pcmCOD14p  pcmCOD19c  pcmCOD25c  pcmCOD5p
hwCOD15    pcmCOD0p  pcmCOD15c  pcmCOD1c   pcmCOD26p  pcmCOD6c
hwCOD16    pcmCOD10p  pcmCOD16c  pcmCOD1p   pcmCOD2c   pcmCOD7p
hwCOD32    pcmCOD11c  pcmCOD16p  pcmCOD20p  pcmCOD2p   pcmCOD8c
```

## 1.3. Codec Driver Tests

- The primary PCM Test

```
playback
  amix 'AUX_PCM_RX Audio Mixer MultiMedia1' 1
  aplay /data/ringtone1.wav
recording
  amix 'MultiMedia1 Mixer AUX_PCM_UL_TX'
  arec -C 1 -R 8000 data/rec.wav
voice call
  amix 'AUX_PCM_RX_Voice Mixer CSVoice' 1
  amix 'Voice_Tx Mixer AUX_PCM_TX_Voice' 1
  aplay -D hw:0,2 -P&arec -D hw:0,2 -P -R 8000 -C 1
```

- The second PCM Test

```
playback
  amix 'SEC_AUX_PCM_RX Audio Mixer MultiMedia1' 1
  aplay /data/ringtone1.wav
recording
```

```
amix 'MultiMedia1 Mixer SEC_AUX_PCM_UL_TX' 1
arec -C 1 -R 8000 data/rec.wav
voice call
amix 'SEC_AUX_PCM_RX_Voice Mixer CSVoice' 1
amix 'Voice_Tx Mixer SEC_AUX_PCM_TX_Voice' 1
aplay -D hw:0,2 -P&arec -D hw:0,2 -P -R 8000 -C 1
```
